THE CONCEPT | SUMMER 2023

Small Business Innovation Research/Small Business Technology Transfer Program

In This Issue

Hello, Innovator! • Beta Preview of an Improved NASA Website • Transitioning Content from sbir.nasa.gov • New Proposal Submission Portal • Helpdesk & Other Contacts

Hello, Innovator!

We count on your innovations to help NASA and the nation research and explore space, and to improve life here on Earth. You count on us for the early-stage, equity-free funding and experience working with NASA experts that make those innovations possible. This edition of our newsletter focuses on a few ways we're innovating to better connect you with the resources you need when you need them.

Beta Preview of an Improved NASA Website

Say hello to the [beta SBIR and STTR landing page](#) on NASA.gov! This new landing page is part of an early, in-progress version of an [improved NASA website](#).

To learn more and provide feedback on the revamped NASA flagship website during the beta period, click [here](#). You'll also find information about the release of NASA's new on-demand streaming service and upgrades to the NASA app.

Small Business Innovation Research (SBIR) / Small Business Technology Transfer (STTR)

Small Business Innovation Research (SBIR) / Small Business Technology Transfer (STTR) is a program that provides funding to small businesses for research and development in space-related technologies.

Your NASA Journey Starts Here

Your NASA Journey Starts Here is a new on-demand streaming service that provides access to NASA's most popular content, including live events, documentaries, and more.

Transitioning Content from sbir.nasa.gov

Our community is used to finding us on the web at sbir.nasa.gov and for now, you still can. However, we'll be working this fall and winter to transition content to the new SBIR and STTR landing page in preparation to shut down sbir.nasa.gov in Spring 2024. Our program team will ensure the most important information and resources make the move to our new site.

New Proposal Submission Portal

You may have heard we're building a new proposal submission interface! ProSAMS (Proposal Submissions and Award Management System) is designed to be an intuitive, user-friendly system that will help streamline the program's application, review, and award management processes. While currently in use only for **SBIR Ignite 2023 Phase I** submissions, it will eventually replace the current Electronic Handbook (EHB) for all NASA SBIR and STTR. Stay tuned to your inbox for more information.

Helpdesk & Other Contacts

We recently changed our Helpdesk email address to agency-di-sbir@mail.nasa.gov as part of an effort to improve our responsiveness to your questions about NASA SBIR and STTR solicitations, the proposal preparation and electronic submission process, and other program areas. If you have had any issues getting your EHB account set up due to this change, your performance rating will not be impacted for any Phase I delays thus far. Please reach out to the Helpdesk if you continue to experience issues or need additional assistance.

We also encourage you to get in touch with SBIR and STTR representatives for each of our centers and mission directorates. For more information about who to contact and how they can help, visit our [Program Contacts](#) page.
